Uzma Khan

Application Name: Notion

Application to help people organize their work, life, projects, etc.

Task 1:

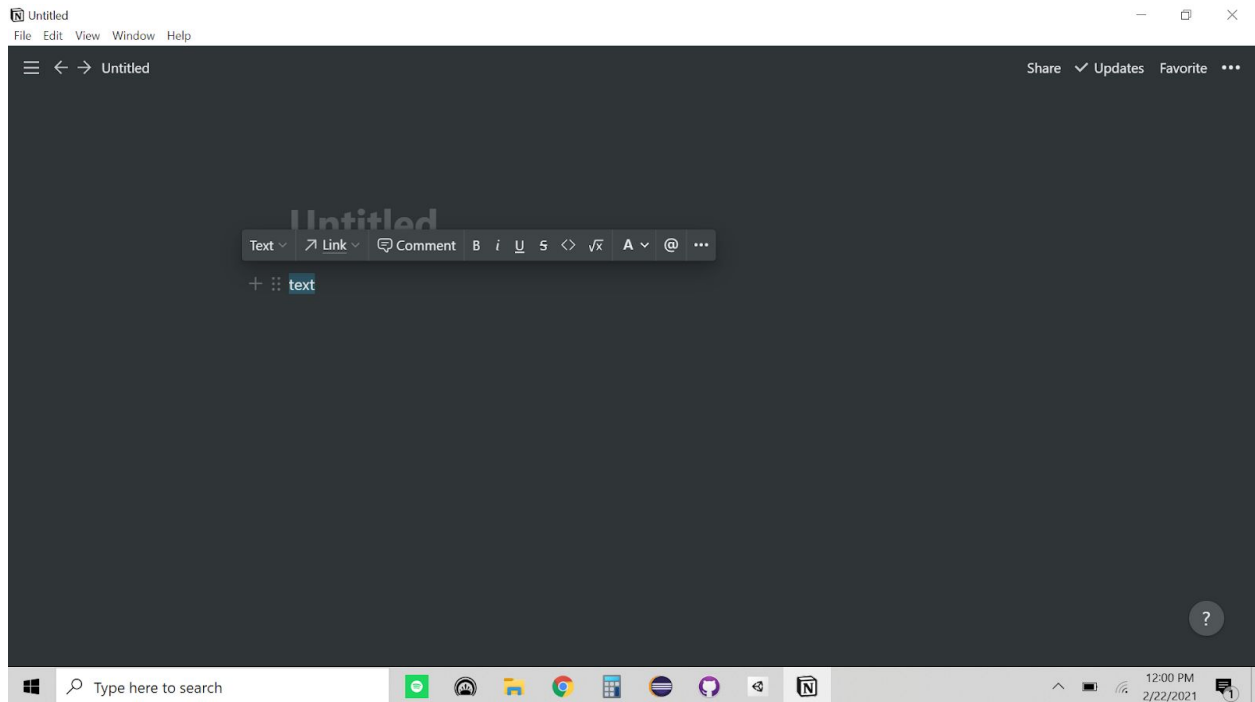

- Opening a new page
- User finds an empty space
 - They type “/” to open up the menu
 - They type in “page”
 - They press “Enter” to open the new page

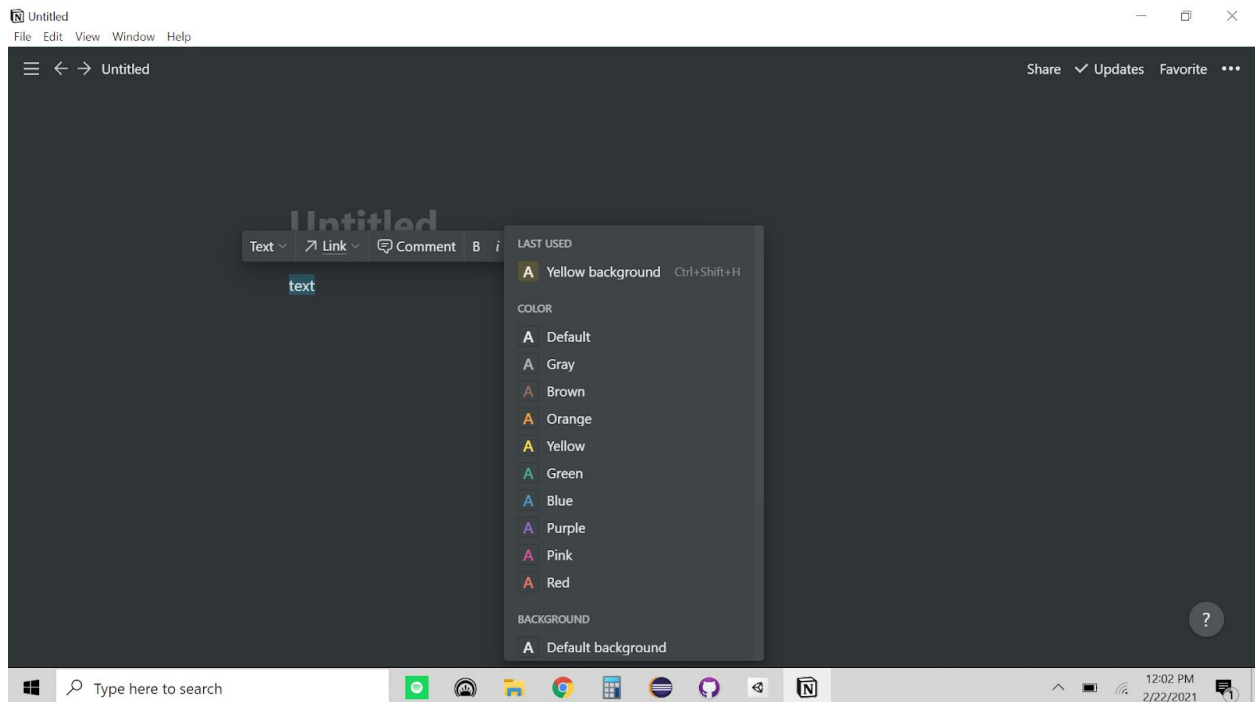

- User may press on the wrong menu option while typing

Task 2:

- Changing the color of a text
- User highlights targeted text to open up options bar

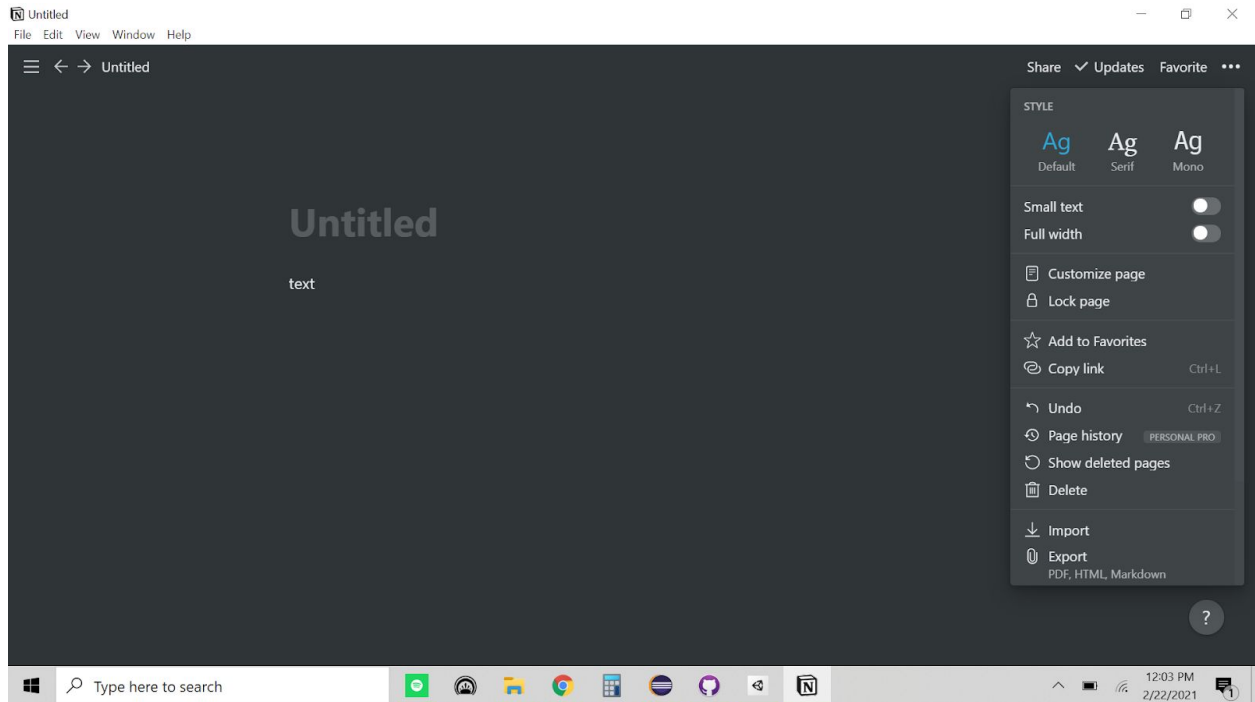

- They click on the “A” to open up color options

- They click the desired color for the text
- User may erase the text or replace it with random keyboard letter while trying to highlight

Task 3:

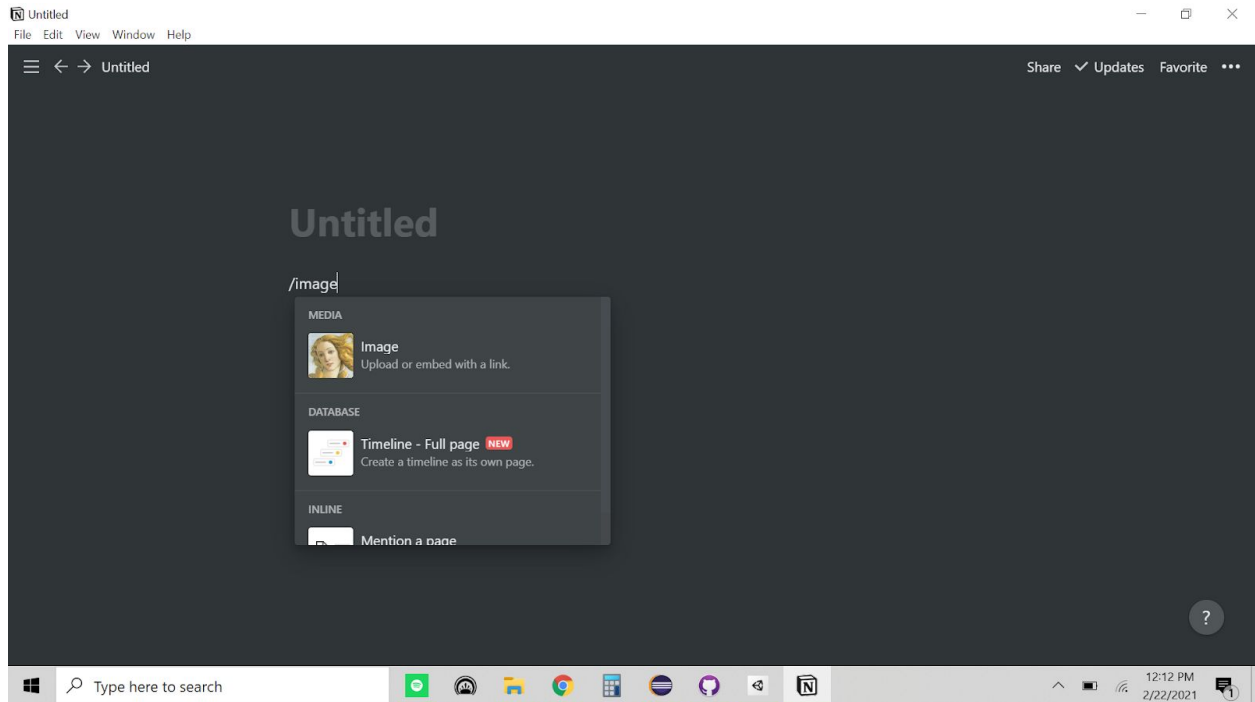

- Undoing an action
- User clicks on the 3 dots on the top right side of the page

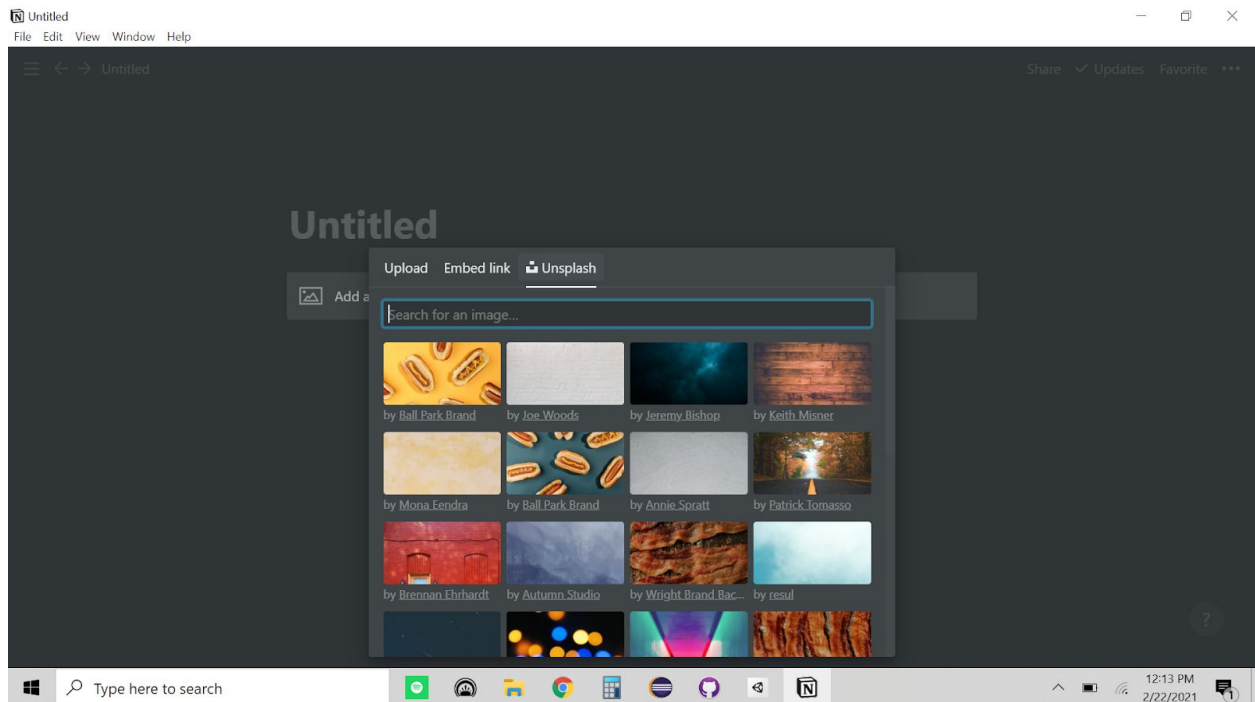

- User clicks on undo to return to previous action committed
- User may have moved to another page before undoing the action making the option unavailable

Task 4:

- Uploading an image to the page
- User types in “/image” to open up options menu
 - They click on the image option

- They click on “unsplash” to select an available image from the unsplash library

- User may click on an unwanted image
